For: Cable Connector Incorporating Anisotropically Conductive Elastomer

ABSTRACT

A separable electrical connector for separably, electrically interconnecting the conductors
5 of one multi-conductor cable to the conductors of a second electrical device that may be an
electrical device such as a chip, or a second multi-conductor cable, or a flexible or rigid printed
circuit board. The connector includes a layer of anisotropic conductive elastomer (ACE) in
electrical contact with the conductors of the cable and the conductors of the second electrical
device. A clamp or another type of mechanical device compresses the ACE, to provide electrical
10 signal paths between the conductors of the cable and the second electrical device, through the
ACE.
